Innovative **Services Support Kits** from
Kem Edwards make Strut and Studding Simple
- Less cost, less risk, less waste, less stock, less labour -

Kem Edwards, suppliers to the construction services industry nationwide, have launched an innovative new strut and studding package to aid first fix installations, where pre-cut lengths and all required fixings arrive on-site ready for installation.

The new affordable Services Support Kits are off-the-shelf for next day delivery, pre-fabricated with fully finished strut and studding, providing a time and cost-saving alternative to cutting and preparing the materials on-site.

The Services Support Kits represent a new concept for the HVAC and M&E industries. With the introduction of these ready-made systems, Kem Edwards are leading the way in sourcing innovative products to save labour, time and ultimately cost whilst improving finished quality and productivity. Additionally, less cutting and finishing on site reduces significantly, the risk of injury to the operative – a huge bonus!

The 2.5mm thick, pre-galvanised struts are available ex-stock in over 15 different channel lengths with varying slotted profile, together with 30

different lengths of pre-cut M10 studding, fully zinc plated. As well as offering this large selection of lengths for both strut and studding off the shelf, Kem Edwards can also provide other sizes and profiles to order.

Richard Edwards, Managing Director of Kem Edwards, is proud of the new kits which form part of the latest in a comprehensive range of innovative products the company offers; "The Service Support Kits are an effective solution designed specifically to maximise productivity and increase the level of quality of materials used. With no storage capacity required and little or no waste the cost of using quality products on-site is reduced. This underlines that our value added approach to saving time and cost through innovation is exactly what our customers and the industry need."

In order to optimise productivity Kem Edwards suggest the kits are used in conjunction with the Trapeze Hanger and the Kwikstrut, self bolting bracket system.

To compliment the Services Support Kits Kem Edwards also operates a bracket fabrication and assembly service that presents a viable alternative to preparing and assembling channel supports on-site. Working to a customer's schedule and required dimensions, Kem Edwards can quickly supply a fully constructed, palletised delivery of all modules, each individually labelled with sizes and location details.

By supplying a pre-fabricated service Kem Edwards can reduce time and skills needed on-site and also reduce wastage created by on-site cutting and assembly.
